

Assignment#5 (Lab)

Evaluation: Week # 11 (15\4\2012), during lab class

ASP.NET – Web Server Controls

1. Create a Web Form that contains two `TextBox` controls, a `Label` control and a `Button` control. Add an event handler to the `Button` control so that it adds the two numbers entered into the two `TextBox` controls and displays the result in the `Label` control.
2. Create a Web Form that contains a `DropDownList`, `TextBox`, `CheckBoxList`, `Calendar`, and a `Button` control. The two list controls should have multiple items defined. The `Button`'s click event handler should display in a `Label` control the item selected in the `DropDownList`, the text entered in the `TextBox`, the checked items in the `CheckBoxList`, and the selected date in the `Calendar`.
